

Title of Invention: Mowing Device

ABSTRACT

A device that is a fully self-contained motorized mowing apparatus with an electric-clutch. It is in tow behind self-propelled mowing equipment. A tow hitch frame is attached above and to the carrier frame, back of center of the mower carrier frame. Front wheels are stationary and rear wheels pivot, allowing the mower to follow directly off to the side of the lead equipment. Towing more specifically to "zero turn" tow units without leaving an uncut strip of turf.
